Summary

AI Engineer with 2+ years of experience designing and deploying enterprise-scale Generative AI and Agentic AI systems. Experienced in LLM applications, RAG, multi-agent orchestration, MCP, LangChain, LangGraph, and Azure AI, with a proven track record of building production AI solutions that automate workflows, improve operational efficiency, and serve thousands of enterprise users at Johnson Electric.

Education

KPR Institute of Engineering and Technology

Coimbatore, Tamil Nadu

BACHELOR OF TECHNOLOGY IN AI and Data Science, GPA: 8.4/10.0

May 2024

Skills

Generative AI & Agentic Systems: LLMs, RAG, Agentic AI, Multi-Agent Systems, LangChain, LangGraph, LlamaIndex, MCP, Microsoft Agent Framework, AutoGen, A2A Protocol, Prompt Engineering, LiteLLM, OpenAI APIs, Llama, AI Automation, Semantic Retrieval, Workflow Orchestration

Machine Learning & AI: Machine Learning, Deep Learning, NLP, SpaCy, OCR, OpenCV

Cloud, DevOps & MLOps: Azure AI Services, Azure AI Search, Azure AI Foundry, Azure ML Studio, Azure DevOps, Azure Functions, App Services, Logic Apps, Virtual Machines, Kubernetes, Docker, Jenkins, Power Automate

Backend & Application Development: Python, FastAPI, Pydantic, Django, Flask, Streamlit, REST APIs, HTML, CSS

Databases & Vector Systems: Vector Databases (FAISS), MongoDB, Neo4j, MySQL, SQLite

Observability & Version Control: Langfuse, Application Insights, Git

Achievements

- **AI Trailblazer Award (x2)** – Recognized twice by Johnson Electric for pioneering AI innovations within the enterprise Innovation Lab.
- **Best Team Award (x2)** – Honored for outstanding cross-functional project delivery and measurable business outcomes.
- **Global HR Policy Chatbot Recognition** – Awarded for successfully architecting and rolling out the HR Policy Chatbot across Johnson Electric's global enterprise, achieving 96% production accuracy.

Experience

Johnson Electric | Chennai, India

June 2024 - Present

JUNIOR ENGINEER - AI

Nov 2025 - Present

Automated Sales Email Orchestration & Routing Pipeline:

- Architected and deployed a LangChain-based Agentic AI workflow using Python, LLM APIs, and Power Automate to process 100-200 daily sales team emails across sales, finance, HR, and billing contexts
- Replaced a fully manual, human-forwarded triage process with automated intent classification to distinguish resolvable queries from action-required requests.
- Built logic for the agent to auto-draft responses directly, and to identify and request any missing information from the customer when needed
- Implemented deterministic routing through custom connectors to escalate action items to the correct department and region-specific team, with automated acknowledgment emails sent to requesters
- Cut manual email triage by 80% and accelerated response times across departments

Multi-Enterprise Production Stock & Machine Availability Agent

- Built a multi-agent system using the DeepAgent framework with skill-based sub-agents connecting to multiple MCP servers across enterprise systems to fetch real-time production data – stock availability, product specifications, and machine capacity
- Designed the workflow to handle customer product requests end-to-end: checking specification match, available stock, and machine/production line availability to determine accurate delivery timelines
- Replaced a manual process where engineers spent 4-5 hours per request cross-checking systems, reducing lookup time to under a minute
- Currently used by nearly 100 engineers, with plans to scale company-wide
- Deployed and maintained production AI services using Docker, Kubernetes, and Jenkins CI/CD pipelines across cloud infrastructure

Multi-Database Agentic RAG Infrastructure:

- Architected and productionized an Agentic RAG system using ReAct-based orchestration and MCP integrations to dynamically retrieve information across multiple distributed vector databases — spanning HR policies, IT policies, and general company-wide policies
- Integrated with ITPL to enable employees to fetch live ticket data and status alongside policy and procedural information
- Enabled all IT employees to look up how-to steps for internal requests (e.g., raising tickets, following procedures) and check ticket status in one place, without navigating multiple systems

Global Enterprise HR Policy Chatbot:

- Built and deployed a global HR policy chatbot using LangGraph and Azure AI Search, serving all 10,000+ employees across the enterprise
- Indexed and retrieved across enterprise-wide HR policy datasets to answer employee queries with grounded, policy-accurate responses
- Achieved 96% production accuracy, with 100-200 employees using it every hour
- Eliminated the need for employees to search through lengthy policy documents or wait on HR responses for routine questions, reducing HR team's manual query load

AI INTERN

June 2024 - Oct 2024

Generative AI SQL Data Chatbot:

- Built a LlamaIndex-powered natural language-to-SQL interface for the internal data team, converting plain-language prompts into SQL queries for enterprise warehouse retrieval and analytics
- Enabled business users without SQL expertise to independently query thousands of warehouse records, removing dependency on the data team for routine data pulls

Marico Ltd | [India](#)

DATA SCIENCE INTERN

July 2023 - Jan 2024

Supply Chain & Behavioral Analytics:

- Built and evaluated machine learning models using Scikit-learn and Pandas to analyze supply chain behavior, purchasing trends, and distribution efficiency for business strategy optimization.

Automated Repo Intelligence & Metadata Parser:

- Implemented an NLP- and API-driven metadata analysis pipeline to process GitHub repositories and Jira datasets, reducing manual technical auditing effort by 80%.
