

Srivatsa S

AI Engineer

9629221540 | srivatsas0503@gmail.com | <https://www.linkedin.com/in/srivatsa-s05/>

Motivated developer with a flair for creative problem-solving in real-time circumstances. Team-oriented and committed to delivering inventive solutions, I am enthusiastic about taking on challenging roles to make meaningful contributions. Eager to apply skills in a dynamic and impactful environment.

INTERNSHIPS

AI Intern, Johnsons Electric

June 2024 – Present

Developed and deployed full-stack AI using Gen AI and automation projects in cloud environments, enhancing operational efficiency and scalability. Created an SQL bot to fetch and analyze sales data, providing actionable insights for the sales team. Developed an HR bot to address employee queries, improving response times and overall HR service quality.

Data Science Intern, Marico Ltd

July 2023 – Jan 2024

Actively developed machine learning projects that directly enhance the company's sales performance. Spotted and examined intriguing patterns and trends in all areas of purchases, distributes, and other pertinent fields. Automating the examination of the GitHub repositories and Jira to see the characteristics and applications of each repository for the organization.

Backend Developer Intern, Next99

Dec 2022 – Mar 2023

Created resume extractor to get the resume and analyzes the data present and summarizes the important skills based on the requirements of the user. Adept in resume extraction tools, skilled at efficiently retrieving and analyzing resume data. Proficient in identifying key skills aligned with user-defined requirements. Experienced in streamlining the hiring process by providing insightful skill summaries.

EDUCATION

KPR Institute of Engineering and Technology (2020 -2024)

Bachelor of Technology Artificial Intelligence and Data Science | 8.4 CGPA | President Quiz Club KPRIET | International Service Director Rotaract Club KPRIET | Vice President AD Association | Class President

National Model Higher Secondary School (2018-2020)

83% in 10th grade | 66% in 12th grade | Sergeant of Arms Interact Club

SKILLS

TensorFlow	Keras	NumPy	Pandas	Django	Flask
Python	OpenCV	SQL	Sci-kit Learn	Spacy	Git
HTML/CSS	PowerBI	JavaScript	React	Rest Api	Java
Docker	Azure	Kubernetes	Gen AI	Prompt Engineering	

PUBLICATIONS

TWEETS CLASSIFICATION BASED ON SEXISM

Jan 2023

The tweets about feminism were classified based on the features and the classification was done for both binary and multiclass classification using various machine learning models. The accuracy for multiclass classification is 83% and for binary classification is 87%.

Alert system for QUADRIPLÉGIC PATIENT

Jul 2023

By continuously monitoring the patient's eye movements using deep learning model through a strategically placed camera, the system detects intentional glances towards the left side. Upon recognition, an automatic alert is generated, notifying caregivers promptly. This innovative solution aims to enhance patient independence and alleviate the need for constant assistance, ensuring timely support while preserving the patient's privacy and autonomy.

PROJECTS

Self Help Application for Mental conditions

April 2024

Developed a mental health companion application using a LLaMA-based chatbot to support patients. Automated chat session reporting to doctors and implemented SOS alerts for critical situations, enhancing patient safety and well-being. The application fosters a sense of companionship, reducing feelings of isolation. It also provides valuable insights to healthcare providers, improving the overall quality of care. It utilizes Gen AI along with prompt engineering and Data Analytics.

Stack Overflow Question Recommendation

Jan 2024

Designed and implemented a Stack Overflow question and answer recommendation system using collaborative filtering and natural language processing techniques. Leveraged user behavior and content analysis to provide personalized suggestions, enhancing the user experience. Achieved improved engagement and knowledge sharing within the Stack Overflow community.

Audio-based Emotion Detection of Animals

Mar 2023

The process involves collecting real time data using sensors and connecting it through database. The collected data would be engaged to classify and find the emotion using Deep Learning methodology. It helps to alert the care taker whenever there is an emergency situation or an abnormality.

Answer script evaluation

Apr 2023

The answer scripts are scanned using OCR and then the answers are graded using NLP. The grammar and the texts are evaluated based on similarity to the answers to the questions. The grading process is enhanced by assessing the similarity between the answers provided and the expected responses to the questions. It contributing to a fair and accurate representation of students' performance.

Voice based chatbot

Nov 2022

A Natural Language Processing based voice chat helps us know about the details of a specific domain. It is developed using deep learning-based classifier and the backend framework using Django. This NLP-driven solution not only provides detailed insights into specific domains but also showcases a commitment for versatile and intelligent communication.
